DECLARATION

We, the undersigned, hereby declare that the project report submitted as part of the Business Immersion course at PSG Institute of Management, Coimbatore, is the result of our original work carried out by our team of five members. This project has not been submitted to any other institution or university for the award of any degree, diploma, or certificate. All sources of information used in this report have been duly acknowledged and referenced. Any resemblance to other published or unpublished works is purely coincidental. We affirm that we have adhered to the principles of academic integrity and honesty throughout the preparation and presentation of this report.

Team Members

1. 25AB31- NITHISH R
2. 25AB32-NITHISH SHRIRAM SS
3. 25AB33-NITHYASRI N
4. 25AB34-PRANAV K S
5. 25AB35-PRITHIV ATHARSH S

Date: 17.04.2026

Place: Coimbatore

CERTIFICATE

This is to certify that the Business Immersion Project Report submitted to PSG Institute of Management, Coimbatore, in partial fulfilment of the requirements for the award of the Degree of Master of Business Administration (MBA), is a record of the original work done by Nithish R 25AB31, Nithish Shriram 25AB32, Nithyasri N 25AB33, Pranav 25AB34 and Prithiv Atharsh 25AB35 and submitted for the viva-voce examination held on 17 April 2026.

Faculty Guide

ACKNOWLEDGEMENT

We would like to express our sincere gratitude to all those who supported us in the successful completion of our **Business Immersion Project**.

We extend our sincere thanks to the management and staff of **Bright castings** for permitting us to undertake this project in their organization and for sharing the necessary information and practical insights required for the study.

We would especially like to thank **Mr. Balraj**, Managing Director and the concerned department personnel for their time, cooperation, and support during our company visits and interactions.

We thank **Dr. V. Srividya**, Director, PSG Institute of Management, for providing us with the opportunity to undertake this project as part of our MBA curriculum.

We express our heartfelt thanks to our faculty guide, **Dr. Firdaus Bashir**, Assistant Professor, PSG Institute of Management, for her guidance, encouragement, and valuable support throughout the project.

Finally, we thank all those who directly and indirectly contributed to the successful completion of this project.

1. INTRODUCTION

The Business Immersion Programme (BIP) provides MBA students with an opportunity to gain practical exposure to real-world business environments. Through this program, students analyze the functioning of organizations, identify operational challenges, and recommend strategic improvements. As part of the programme, our team was assigned to **Bright Castings**, a manufacturing firm engaged in casting production and related industrial activities. The objective of this immersion was to understand the company's operational processes, financial management practices, and marketing activities.

During the initial phase of the project, we conducted an organizational study to examine how the company manages its financial records, operational workflows, and business development activities. The analysis helped us identify key operational gaps and potential areas for improvement. The insights gathered during this phase formed the foundation for the strategic solutions proposed in Phase 2 of the project.

2. COMPANY PROFILE

Bright Castings is a manufacturing firm specializing in the production of casting components used in industrial applications. The company primarily serves business-to-business (B2B) clients across manufacturing and engineering sectors. The organization focuses on delivering high-quality casting products while maintaining operational efficiency and customer satisfaction. Over the years, the company has developed strong technical capabilities and built long-term relationships with several clients.

However, like many small and medium-sized manufacturing enterprises, the company operates with limited digital infrastructure and relies heavily on manual processes for financial management and operational coordination. The company's management structure is relatively lean, which allows for flexible decision-making but also creates challenges in areas such as structured marketing and data-driven management.

3. INDUSTRY OVERVIEW

The casting industry plays an important role in the manufacturing ecosystem, supplying essential components to sectors such as automotive, construction, machinery, and engineering. The industry is highly competitive, with companies constantly striving to improve product quality, cost efficiency, and customer relationships.

Key characteristics of the casting industry include:

- Strong reliance on industrial demand
- High competition among manufacturers
- Importance of operational efficiency and cost control
- Increasing adoption of digital tools for business management
- Growing need for effective marketing and client relationship management

Small and medium enterprises in this industry often face challenges in adopting digital management systems and structured marketing strategies. As a result, many firms struggle to scale their operations despite having strong technical capabilities.

4. ORGANIZATIONAL ANALYSIS

During the initial stage of the Business Immersion Programme, the team conducted an organizational analysis to understand the internal functioning of Bright Castings.

The study focused on three major areas:

4.1 Financial Management

The company maintains financial records primarily using manual systems and spreadsheets. While the data is available, it is not consolidated into a centralized system that can provide real-time insights into financial performance. This makes it difficult for management to monitor important financial indicators such as:

- Revenue trends
- Operational expenses
- Cash flow

- Receivables and payables
- Profit margins

Without a centralized dashboard or management information system, financial analysis becomes time-consuming and less efficient.

4.2 Operational Processes

The operational processes of the company are well established and focused on production efficiency and product quality. However, the integration between operational data and financial information is limited. This creates difficulties when management needs to evaluate the financial impact of operational decisions.

4.3 Marketing and Business Development

The company does not have a dedicated marketing structure. Business development activities such as client outreach, follow-ups, and new customer acquisition are handled informally. Although the company has strong production capabilities, the lack of a structured marketing strategy limits its ability to expand into new markets and attract additional clients.

5. PROBLEM IDENTIFICATION

Based on the organizational analysis and framework application, several operational challenges were identified at Bright Castings.

5.1 Lack of Digital Financial Monitoring

The company relies on manual financial records and spreadsheets, which makes it difficult to track key financial indicators in real time. This limits the management's ability to make quick and informed decisions.

5.2 Limited Data Visibility

Financial and operational data are stored in separate formats without centralized integration. This creates inefficiencies in financial reporting and performance evaluation.

5.3 Absence of Structured Marketing

Marketing activities are conducted informally without a systematic process for client outreach, lead tracking, or business development.

5.4 Limited Market Visibility

Due to the lack of organized marketing initiatives, the company has limited visibility in potential markets and may miss opportunities to acquire new customers.

6. OBJECTIVES

The primary objectives of this project are:

- To develop a digital financial dashboard that enables effective tracking of financial performance indicators.
- To improve data visibility and decision-making through a centralized monitoring system.
- To reduce errors and inefficiencies associated with manual financial management practices.
- To support marketing development through structured client outreach initiatives.
- To recommend participation in industrial trade fairs and exhibitions to enhance market visibility and generate new business opportunities.

7 . METHODOLOGY / APPROACH

The project follows a structured approach to analyze the problem and develop practical solutions for Bright Castings.

7.1 Problem Assessment:

The first stage involved understanding the existing financial and marketing practices within the organization. The current manual financial tracking system and informal marketing processes were evaluated to identify operational gaps and areas requiring improvement.

7.2 Data Collection and Preparation:

Financial data maintained by the company was collected and organized using Microsoft Excel. The collected data was cleaned, standardized, and structured to ensure consistency and accuracy. Key financial performance indicators were identified based on management requirements.

7.4 Financial Dashboard Development:

Based on the identified KPIs, a financial dashboard framework was designed using Power BI. Data models were created to integrate financial information and generate visual insights related to revenue, expenses, profit margins, receivables, payables, and cash flow. The dashboard was validated to ensure accuracy and usability.

7.5 Marketing Situation Analysis

An analysis of the company's current marketing position was conducted. Internal and external factors influencing the business environment were examined using strategic analysis tools.

7.6 Framework Application

Several strategic frameworks were applied to guide the analysis:

- SWOT Analysis was used to identify internal strengths and weaknesses as well as external opportunities and threats.
- BCG Matrix was used to evaluate product portfolio performance.
- STP Framework (Segmentation, Targeting, Positioning) was used to identify suitable market segments and positioning strategies.

7.7 Strategy Formulation

Based on the insights obtained from the analysis, structured marketing strategies were formulated. Marketing mix elements including product positioning, pricing considerations, distribution channels, and promotional strategies were also evaluated.

7.8 Feasibility and Evaluation

The proposed strategies were evaluated in terms of financial feasibility, operational practicality, and potential impact on the company's performance.

7.9 Action Plan Development

A phased implementation roadmap was designed to guide the organization in gradually adopting the proposed solutions while minimizing operational disruptions.

8. IDENTIFICATION OF STRATEGIES

Strategy 1: Development of a Digital Financial Dashboard

This strategy focuses on creating a centralized financial dashboard that digitizes the company's manual financial records and provides real-time monitoring of key financial indicators. The dashboard will display metrics such as revenue, expenses, profit margins, receivables, payables, and cash flow.

By integrating financial data into a single platform, the management team will be able to monitor financial performance more effectively and make informed decisions. This strategy adds value by improving transparency, reducing reliance on manual calculations, and enhancing the speed and accuracy of financial reporting.

Strategy 2: Structured B2B Email Marketing and Lead Tracking System

The second strategy involves implementing a structured email outreach program aimed at identifying and contacting potential business clients. A simple lead management system will be developed to track responses, follow-up communications, and potential conversions.

This approach enables the company to create a consistent pipeline of potential clients while maintaining a professional approach to business communication. This strategy is particularly suitable for small and medium-sized enterprises as it provides a cost-effective marketing channel with measurable outcomes.

Strategy 3: Participation in Industrial Trade Fairs and Exhibitions

The third strategy focuses on improving the company's market visibility by participating in industry-specific trade fairs and exhibitions. These events provide opportunities to showcase products, interact directly with potential buyers, and establish long-term business relationships.

Participation in such exhibitions also enhances brand recognition and helps the company stay informed about industry trends and competitor activities. Given Bright Castings' strong technical capabilities, exhibitions can serve as an effective platform for expanding the company's customer base.

Frameworks and Tools Used

Several analytical tools were used during the strategy development process:

- SWOT Analysis
- PESTLE Analysis
- Benchmarking with similar industry firms
- Impact–Effort Matrix
- Process Analysis of existing workflows

These frameworks helped ensure that the proposed strategies are both practical and aligned with industry best practices.

9. FEASIBILITY AND PRACTICALITY

9.1 Practicality of Implementation

The proposed solutions are practical and feasible for Bright Castings considering its operational structure and available resources. Since the company already maintains financial data manually, the process of creating a financial dashboard primarily involves digitizing existing information rather than developing an entirely new financial system.

Similarly, the marketing strategies proposed do not require large investments or major structural changes. Email outreach and exhibition participation can be implemented gradually and managed with limited resources.

9.2 Key Challenges and Risk Mitigation

1. Transition from manual to digital management systems

Challenge: Bright Castings currently relies on manual financial and operational records, which may slow down the adoption of an integrated financial dashboard and MIS.

Risk Mitigation: Adopt a phased implementation approach, starting with core financial KPIs. Provide basic orientation to users and run the digital dashboard parallel to manual records during the initial stage.

2. Data quality and consistency issues

Challenge: Existing financial and operational data maintained manually may have inconsistencies, missing entries, or format variations, affecting dashboard accuracy.

Risk Mitigation: Perform data cleaning, standardization, and cross-verification in Excel before integrating the data into Power BI. Periodic data validation checks will ensure reliability.

3. Lack of structured marketing processes

Challenge: Marketing activities such as email outreach, lead follow-ups, and exhibition participation are currently informal, which may result in poor lead conversion and missed opportunities.

Risk Mitigation: Define a simple, structured marketing workflow and link lead tracking and follow-up status to the proposed dashboard for better accountability and visibility.

4. Integration between marketing and operational decision-making

Challenge: Without an integrated MIS, marketing insights may not effectively support production planning, financial forecasting, and delivery commitments.

Risk Mitigation: Use the financial dashboard as a centralized information system to align marketing inputs with operational and financial planning, improving coordination and decision-making.

9.3 Feasibility Evidence

The feasibility of the proposed strategies is supported by several factors. Many small and medium-sized manufacturing firms successfully use financial dashboards and exhibition-based marketing strategies to improve operational control and market reach.

The cost of implementing a basic dashboard and conducting email outreach campaigns is relatively low compared to the potential benefits of improved financial transparency, faster decision-making, and increased business opportunities. A pilot implementation focusing on key financial metrics and basic lead tracking can deliver quick results and demonstrate the value of the system before expanding to a full-scale implementation.

10. DETAILED ACTION PLAN

Step-by-Step Implementation Plan

Phase / Action	Key Activities	Responsible	Resources Required	KPI / Success Indicator
Understand Current Situation	• Review financial records • Identify marketing gaps • Finalize dashboard KPIs	MBA Project Team Accounts Team Management	Financial records Management meetings Excel	• KPI list finalized • Problem areas documented
Organize & Clean Data	• Collect financial data • Enter into Excel • Remove errors & standardize format	MBA Project Team Accounts Staff	MS Excel Historical data	• Improved data accuracy • Minimal missing entries
Build Financial Dashboard	• Create Power BI data model • Design visuals (Revenue, Expenses, Profit, Receivables, Payables, Cash Flow)	MBA Project Team (Design) Accounts Team (Support) Management (Approval)	Power BI Laptop/System KPI framework	• Dashboard runs smoothly • Management views KPIs instantly

	• Validate with management			
Analyze Marketing Position	• Conduct SWOT & external analysis • Evaluate product position	MBA Project Team Management	SWOT & PESTLE tools Industry insights	• Strengths & opportunities identified
Apply Strategic Frameworks	• Classify products using BCG Matrix • Define target segments using STP	MBA Project Team Management	BCG template STP framework	• Clear market focus defined
Develop Structured Marketing Plan	• Design B2B email strategy • Create lead tracking system • Plan exhibition participation	MBA Project Team Sales Team Management	Email tools Lead tracking sheet Budget allocation	• Emails sent • Leads generated & tracked
Launch & Pilot Implementation	• Make dashboard live • Start email campaigns • Register for industrial fair	Management Accounts Team Sales Team	Training sessions Communication templates	• Regular dashboard usage • Increase in inquiries
Continuous Monitoring & Improvement	• Monthly review meetings • Compare performance before & after implementation	Management Accounts & Sales Team	Dashboard reports Review meetings	• Revenue growth % • Improved receivables cycle • Increase in qualified leads

11.IMPLEMENTATION FRAMEWORK

Step-by-Step Plan for Executing the Strategy

The implementation framework provides a structured approach to executing the recommended strategy of developing a Digital Financial Dashboard supported by a Structured B2B Email Marketing and Lead Tracking System for Bright Castings. The framework focuses on gradual implementation to ensure smooth adoption without disrupting existing operations.

Step 1: Understanding Current Systems and Requirements

The first step involves reviewing the current financial recording practices and marketing activities within the organization. Existing financial records maintained through manual ledgers and spreadsheets will be examined to identify key financial indicators such as revenue, expenses, profit margins, receivables, payables, and cash flow. At the same time, the existing client acquisition practices will be reviewed to understand gaps in marketing and lead management.

Step 2: Data Collection and Organization

Historical financial data maintained by the company will be collected and organized in a standardized format using Microsoft Excel. This process involves cleaning the data, correcting inconsistencies, removing duplicate entries, and ensuring that financial records are structured for further analysis and integration with digital tools.

Step 3: Development of the Digital Financial Dashboard

Once the data is prepared, a financial dashboard will be developed using Power BI. The dashboard will include visual representations of key financial indicators such as revenue trends, operational expenses, profit margins, receivables, payables, and cash flow. These visual insights will allow management to monitor financial performance quickly and efficiently.

Step 4: Implementation of B2B Email Marketing System

A structured email marketing approach will be introduced to improve business development activities. Potential client databases will be created using industry directories and online platforms. Professional email templates will be developed for outreach, and a lead tracking system will be implemented to monitor responses, follow-ups, and potential conversions.

Step 5: Pilot Implementation and Testing

The dashboard and marketing system will initially be tested through a pilot implementation. During this stage, management and staff will use the system alongside existing processes to evaluate its functionality and reliability. Necessary adjustments will be made based on feedback.

Step 6: Full-Scale Implementation and Monitoring

After successful testing, the system will be fully implemented. Regular monitoring will ensure that financial data is updated periodically and marketing leads are tracked effectively. Management will use the dashboard as a decision-support tool for financial planning and operational coordination.

12. TIMELINE WITH KEY MILESTONES

The project implementation is planned over several weeks to ensure systematic execution and smooth integration of the proposed strategies.

Week 1-2 – Organizational Study and Problem Identification

During the first week, the project team conducted an organizational analysis to understand the company's operational structure, financial practices, and marketing activities. Key operational challenges related to manual financial systems and informal marketing practices were identified.

Week 3-4 – Data Collection and Initial Analysis

In the second week, financial data from the company was collected and reviewed. The team examined financial records, identified key financial indicators, and evaluated the accuracy and consistency of the available data.

Week 5-6 – Data Cleaning and Preparation

The collected financial data was organized and cleaned using Microsoft Excel. Errors, inconsistencies, and missing entries were corrected to ensure reliability. The finalized dataset served as the foundation for dashboard development.

Week 7-8 – Dashboard Design and Development

During the fourth week, the financial dashboard was designed using Power BI. Data models were created and visualizations were developed to display financial performance indicators in an easy-to-understand format.

Week 9-10 – Marketing Strategy Development

In the fifth week, the team developed a structured B2B email marketing strategy. Potential customer segments were identified, and lead tracking templates were created to record outreach activities and responses.

Week 11-12 – Strategy Evaluation and Validation

The final week involved evaluating the proposed strategies based on feasibility, practicality, and potential impact. The most viable strategy was recommended for implementation, supported by an implementation roadmap and monitoring plan.

13. CONCLUSION AND NEXT STEPS

Limitations and Challenges Faced

During the Business Immersion Programme and while developing the proposed strategies for Bright Castings, the team encountered several practical limitations and operational challenges. These are summarized below:

1. Transition from Manual to Digital Management Systems

Bright Castings currently relies on manual registers and spreadsheets to maintain financial and operational records. The shift from a manual system to a digital financial dashboard or Management Information System (MIS) may take time as employees adapt to new tools and processes.

2. Data Quality and Consistency Issues

Since financial data is maintained manually, some records may contain inconsistencies, missing entries, or variations in format. These issues can make data analysis more time-consuming and may affect the accuracy of financial insights.

3. Lack of Structured Marketing Processes

Marketing activities such as client outreach, follow-ups, and participation in exhibitions are handled informally. The absence of a structured marketing system can limit the company's ability to systematically track leads and convert potential clients into business opportunities.

4. Limited Integration Between Marketing and Operational Decision-Making

Without a centralized digital system, insights from marketing activities are not directly connected with financial monitoring or operational planning. This may create coordination challenges when aligning marketing efforts with production capacity and delivery commitments.

14. SUMMARY OF THE FINAL RECOMMENDATION

Based on the analysis conducted during the project, the study recommends the implementation of a Digital Financial Dashboard supported by a Structured B2B Email Marketing and Lead Tracking System. The Digital Financial Dashboard is designed to address the company's reliance on manual financial records by integrating key financial indicators into a centralized digital platform. Through visual dashboards and real-time data monitoring, management will be able to track revenue, expenses, profit margins, receivables, payables, and cash flow more effectively.

At the same time, the introduction of a structured B2B email marketing system will help the company develop a more organized approach to client acquisition and lead management. By maintaining a database of potential clients and tracking communication with them, the company can gradually expand its customer base and reduce its dependence on informal networks. Together, these strategies provide a balanced solution that strengthens both internal financial management and external market outreach, supporting the company's long-term growth objectives.

15. EXPECTED BENEFITS AND FUTURE CONSIDERATIONS

The implementation of the proposed strategies is expected to bring several benefits to Bright Castings.

Firstly, the digital financial dashboard will improve financial transparency and enable faster access to important business information. Management will be able to monitor financial performance more efficiently, identify trends, and make informed decisions based on real-time data.

Secondly, the structured marketing approach will help the company increase its visibility in the market and create a consistent pipeline of potential clients. Over time, this can lead to improved business opportunities and stronger market presence.

Another important benefit is the improvement in operational coordination. When financial data and business development activities are monitored systematically, it becomes easier for the organization to align production planning, cost management, and client requirements.

Looking ahead, the company may also consider expanding the system by integrating additional features such as inventory tracking, production analytics, and customer relationship management tools. As the organization grows, these digital tools can gradually evolve into a more comprehensive management information system.

Overall, the strategies recommended in this report provide a practical and scalable approach that can support Bright Castings in improving its operational efficiency, strengthening its financial management practices, and creating new opportunities for sustainable business growth.

ANNEXURE:

MINUTES OF MEETING

Organization: Bright Castings

Meeting With: Mr. Balraj – Managing Director

Topic: Discussion on Marketing Strategy and Digital Financial Dashboard

Date: 18.02.2026

Location: Bright Castings Office

Attendees:

- Mr. Balraj – Managing Director
- Business Immersion Programme Team 07

1. Purpose of the Meeting

The objective was to understand the current practices and operational challenges faced by Bright Castings and to present proposed solutions related to the development of a Digital Financial Dashboard and a Structured B2B Marketing Strategy and gather insights from the Managing Director regarding the feasibility of the proposed strategies.

2. Key Points Discussed

Current Financial Management Practices

Mr. Balraj explained that the company currently maintains most financial records using manual registers and spreadsheets, it becomes difficult to quickly analyse financial performance or track key indicators such as revenue, expenses, receivables, and payables.

Need for a Digital Financial Dashboard

The team presented the concept of a digital financial dashboard that can consolidate financial data into a single platform. Mr. Balraj expressed interest in the idea and agreed that such a system could help management monitor financial performance more effectively.

Existing Marketing Practices

During the discussion on marketing, it was noted that the company mainly acquires clients through personal networks, referrals, and long-term relationships. There is currently no structured marketing system.

Proposed B2B Marketing Strategy

The team proposed implementing a structured B2B email outreach strategy supported by a lead tracking system. Mr. Balraj acknowledged that structured marketing could help increase the company's market visibility and attract new business opportunities.

3. Outcome of the Meeting

- The Managing Director appreciated the proposed strategies and acknowledged the potential benefits of adopting digital tools for financial monitoring.
- He supported the idea of introducing a structured marketing approach to expand the company's client base.
- It was agreed that the proposed strategies could be implemented gradually to ensure smooth adoption within the organization.

4. Conclusion

The meeting provided valuable insights into the operational practices and challenges faced by Bright Castings. The discussion helped validate the relevance of the proposed solutions and confirmed that the implementation of a digital financial dashboard and structured marketing strategy could support the company's growth and improve decision-making.

Reliable Supplier for Precision Iron Castings – Partnership Opportunity Add label ☆

 **Nithish S...** 10:11 pm
to sales ▾

Dear Procurement Team,

I hope you are doing well.

I am reaching out from Bright Castings, a Coimbatore-based ISO-certified foundry with over 40 years of experience in manufacturing high-quality iron castings and precision machined components.

We specialize in:

- Grey Iron & Ductile Iron Castings
- Ni-Resist & Ni-Hard Components
- Fully machined castings as per ASTM, DIN, and BS standards

Our products are widely used in industries such as pumps & valves, automotive, gear systems, and heavy engineering.

With advanced manufacturing facilities (CNC, VMC, CMM) and a strong focus on quality and on-time delivery, we currently serve both domestic and international clients.

We would like to explore the possibility of supplying cast components for your operations. Kindly let us know a convenient time to discuss your requirements, or feel free to share drawings/specifications for evaluation.

Looking forward to your response.

Best regards,
Nithish Shriram
